

Overview

Walchem and Iwaki have created a unique partnership with over 100 years combined pump experience in an array of different markets. This talent has led to the design of the most innovative and comprehensive metering pump product line in the world, the E-Class Metering Pumps.

E-Class features four great series: EZ, EW, EK and EHE. The variety of pumps within the E-Class will fit any water treatment, wastewater, agriculture, water conditioning, car wash or other industrial feed application.

EW Series

E-Class Metering Pumps

Summary of Benefits

■ High Speed Performance

E-Class pumps operate at 360 strokes-per-minute. Most competitive products operate at 180 SPM or less resulting in slug feeding, accelerated diaphragm wear and poor feed control.

■ Dual Bearing Support

All E-Class pumps features dual bearing support. The armature and shaft are supported with a bearing on each end, which ensures proper axial movement, enabling the E-Class to operate at 360 SPM while extending the life of the diaphragm.

■ Superior Check Valve Performance

Dual Check Valve Assemblies, in both suction and discharge fittings, feature precision ball guides and tapered seats. Precise machining and molding of parts limit valve ball travel, ensuring that balls fully seat and seal with every stroke. This superior check valve design and performance guarantees fast priming.

■ High Compression Ratio

The compression ratio of a metering pump is important because it affects the pump's ability to prime and vent. The compression ratio is raised when you reduce the dead volume of the pump head during operation. All E-Class pumps feature a very high compression ratio that ensures proper feed, especially with off-gassing products (i.e.. Sodium Hypochlorite).

EW Series

The EW Series is the flagship of the E-Class with capacities up to 6.7 GPH (25.4 l/h) and a maximum pressure of 150 PSI (10 bar). Compact, powerful and packed with a variety of innovative design features, the EW can enhance any feed application. A variety of liquid end combinations are available to ensure a perfect match for your specific application.

IP65 Construction

The rugged Polyphenylene Oxide (PPO) enclosure is equipped with a durable clear cover to protect the membrane switches and stroke control of the pump, which are mounted opposite the liquid end. The display utilizes a high temperature LCD that provides extra protection from sunlight in outdoor applications.

Control Features

All EW Series pumps come equipped with pulse and stop input/output control.

Feed Accuracy - Powered by the E-Class 360 Stroke-Per-Minute technology, the EW has an incredible adjustment range of 1800:1, ensuring precise feed control for any application.

Pulse Output - The EW pump is capable of sending a pulse out synchronous with pump operation.

Stop Input/Output - A stop input contact will stop the pump operation and close a stop output contact for alarm or remote notification. A red light visibly indicates a stopped condition.

Pre-Stop Input - Orange light that gives warning, but pump continues to operate.

In addition to the features found standard on the EW Series, pumps with the EW-Y control module feature:

Analog Input Control - Fixed or scalable 4-20mA input control.

Pulse Input Control - Pulse input with multiply and divide features (1-9999). 12VDC output power supply for Hall Effect water meters.

Flow Display and Totalization - After calibration the EW will totalize the volume feed and display the flow rate. As long as stroke length is constant the pump will accurately totalize all feed. In cases where the pump is being controlled external with a pulse the pump will display and count down remaining flow based on the pulse input. Coupled with the Posiflow feed verification the EW is equipped to ensure proper feed to your application.

Feed Verification - The EW is equipped with 3 pre-programmed modes for accepting our Posiflow Feed Verification Sensor. The Posiflow provides a pulse feedback to the pump to verify prime and proper feed. Depending on the mode, the user can program to pump to stop, continue operating and/or send an alarm based on the Posiflow input.

Quick-Prime - Hold 2 keys down and pump runs at 100% of speed to prime quickly without adjusting application settings.

Keypad Lock-Out - Keypad functions can be locked out providing feed security, programming integrity and protection from unwanted adjustments.

Easy Draw-Down Calibration - In the calibration mode the user only needs to start and stop the pump, enter the draw-down volume and the pump calibrates volume-per-stroke.

Notes for EW10, 15, 20:

1. Addition of a Multifunction valve increases overall length by 0.37". Addition of an Auto Air Vent Valve increases overall length by 1.59".
2. Addition of a Multifunction Valve increases discharge height by 0.22". No change for the Auto Air Vent Valve.
3. Addition of a Multifunction Valve increases overall liquid end height by 1.16". No change for the Auto Air Vent Valve.

6 OPTIONS

C = High compression configuration: supplied standard with Auto Air Vent Valve in place of manual air vent valve. Available for B10, B15, C15 and C20 sizes with -VC liquid ends only.

M = Multifunction Valve is supplied in place of the manual air vent valve. Available for the 10, 15 and 20 size pumps with VC, VE, VF, PC, PE, PCH and PEH liquid ends. Not available with the AAVV feature.

CONNECTORS (ORDERED SEPARATELY)

E90494 4-Pin, Reverse Key Connector. Use for Stop/Pre-Stop inputs on EW/EW-Y.

E90495 5-Pin Connector. Use for Pulse in and Outputs on EW. Use for digital or analog inputs on EW-Y. Supplied standard with EW-Y pumps.

E90496 5-Pin, Reverse Key Connector. Use for Posiflow input on EW-Y.

E90497 4-Pin Square Connector. Use for output connectors on EW-Y.

All pumps include a manual air vent valve with the exception of FC liquid ends. All pumps include one foot valve, one injection valve, 20 feet of polyethylene tubing and one ceramic weight.
